

S3 Part D: a reviewer that remembers caught lies is safer without excluding or fining anyone

Same 64 contexts in every arm (S1 seeds), sanction none. Dotted line = everyone honest. 'Assume max if caught' is about as safe but cuts many more safe requests (usefulness loss: Harvest 6% vs 0.3%; Fishery MSY 95% vs 0%). A liar cut by a fixed half is fully revealed by one catch, so memory has an easy job there (by construction).
