

S2: hidden over-extraction that pays privately, and fixed-level cheaters' response to audits plus fines

Fishery, MSY target, 64 held-out contexts; one cheating level per group chosen on 8 training contexts. Audits are perfect, the fine is flat per catch, and 1 audit/step covers 17% of agents (far above AI-control budgets). In Harvest, cheating never paid at any fine, so deterrence could not be tested there.
